Looking forward to Christmas

Save the date: June 2017!
New Christmas catalogue

This is what we do with your data

General data check

We carry out the following tests:

Is the resolution right?

If your print data contains elements with insufficient resolution (between 269 ppi and 299 ppi), you will receive a message quickly. If your print data contains elements with a resolution under 269 ppi, you will receive a message immediately. This is also the case with line drawings with a resolution under 1200 ppi.

Are the colours specified correctly?

If you supply data in the colour space RGB, it will automatically be converted to CMYK. All items ordered in 4-c-digital printing and containing special colours, will also be converted to CMYK. Please note that converting colours can lead to colour deviations.

Are all the fonts embedded?

If they are not, your fonts will be displayed incorrectly in a standard font and we will contact you to ask you to revise your data. Embedded font sizes are checked for minimum font size to guarantee average legibility (this does not apply to all fonts however, e.g. scripts, fine fonts, etc.). Fonts that were converted to paths cannot be automatically tested for the minimum size.

If required, and to be more sure of the result, you can opt for the extended data check (subject to a fee) when ordering. If this check results in errors, you will be notified by e-mail asking you to send us a new print file.

We also check the following:

- Does the document size suit the article ordered?
- Has the image trim been created in compliance with the specifications and is there any bleeding of texts/elements?
- Are folds, perforations, cutting lines etc. coordinated with the layout?
- Each product and the relevant printing method is taken into individual consideration (e.g. screen definition in pad printing)
- Visibility of individual elements on the relevant product colour is checked (e.g. white lettering on a white box)

We do not check:

Spelling, image definition and image quality (some images are blurred in spite of 300 ppi), quality of design.

Printing and quality

High quality standards are a matter of course for us. Because the very best quality is the basic requirement for the top-quality production of packaging.

With our state-of-the-art, technological equipment, we are capable of implementing your ideas at the highest level, whether on foil, paper or metal. The best printing results require the very best equipment.

Four colours in one work process, finishing with constant quality control. As our products are mostly created in digital printing, there is a very slight decrease in quality in comparison to offset printing.

There are no register differences. The colours are always compiled from the 4-c process. Special colours in acc. with HKS, RAL or Pantone can only be approximated. In the case of silver boxes, the colours are transparent and therefore often do not achieve the desired colour tone, but can have a very elegant effect thanks to the show-through. Slight streaking may be visible with extensive colour designs. With bled-off prints, an ink mist may be visible at the sides and on any box hinges a product may have. Slight scratches and unevenness may appear due to the material. A white background or printing with white on silver boxes is not possible in digital printing.

After printing, the orders are then transferred for finishing. Most printing products are cut and punched on a modern flat-bed die-cutter. In large print runs, machine processing is standard, but some details require individual handcraft to ensure the desired quality. The quality policy comprises both the the expert command of all corporate processes and the provision of packaging and services that comply with the desired quality. Quality assurance involves in-process control over all production steps and comprehensive pre-delivery inspection before dispatch.

What do 4/0, 4/1, 4/4 mean?

The first number indicates the number of possible colours on the front; the second number indicates the number of possible colours on the reverse.

- 4/0 means that the products are only printed on the front - in four colours (CMYK). The reverse is not printed.
- 4/1 means that the front is printed in four colours (CMYK) and the reverse in one.
- 4/4 means that both the front and the reverse are printed in four colours (CMYK).

Data output as PDF

General information on creating PDFs:

- The PDF file should be compatible with Acrobat 4 (PDF 1.3)
- All fonts must be embedded in the file or converted to paths
- The PDF can only contain grey levels, CMYK or special colours
- The trim has to be defined
- Please ensure there is no colour conversion
- The PDF must not contain any cutting marks, register marks, folding marks, colour patches
- The PDF must not be protected with a password

From InDesign:

A PDF file can be generated from InDesign from Version CS2. To generate a PDF file, click “File” - “Export”. First specify the storage location for your document and then assign a file name. Select “Adobe PDF (Print)” and click “Save”. Another dialog box appears: “Export Adobe PDF”. In the “General” window, please select “Acrobat 4 (PDF 1.3)” under Compatibility. Other preferences have already been preset by InDesign. Do not change the “Compression” as prescribed by InDesign in the second dialog box. In the dialog box “Marks and Bleeds” we require a bleed of 2 mm each all round, but only with images/areas that are to be shown bled-off. “No colour conversion” should be set with “Output”. Finally, set the transparency reduction to “High resolution” in “Advanced” if you are working with transparencies.

Note: Please check before output that you are using no special colours in connection with transparencies. Now you can export your PDF file.

From Illustrator:

Please first ensure that your document is created in the CMYK colour mode under “File” - “Document Color Mode”. A PDF file can also be generated in Illustrator from Version CS2. To generate a PDF file, click “File” - “Save As”. First specify the storage location for your document and then assign a file name. In “Format” select the format “Adobe PDF (pdf)” and click “Save”. In the “General” dialog box select “Top-quality print” for Adobe PDF specification and “Acrobat 4 (PDF 1.3)” for compatibility. Please do not change the setting of “Compression” in the second dialog box either. In the dialog box “Marks and Bleeds” we require a bleed of 2 mm each all round, but only with images/areas that are to be shown bled-off. “No conversion” should be set for colour conversion in the “Output” dialog box. Please do not change any other settings and save your file as a PDF.

Colour space/mode

CMYK:

The letters CMY refer to the basic colours of subtractive colour synthesis cyan, magenta and yellow. These three basic colours mixed together result in black.

In four-colour printing, black (or Key) is printed to support contrasts. This colour space is used in all print products.

RGB:

Red, green and blue (RGB) are the additive basic colours. If you mix these three colours, you obtain white. This colour space is used for TVs, monitors, cameras, scanners ... As the RGB colour space is much more extensive than the CMYK colour space, documents created in RGB have to be reduced in their colour space. This results in a change of colour for which we cannot be held responsible/made liable.

Bleed and trim edge

The end format (magenta base line) of the product is lengthened by an additional 2 mm.

Example: End format: 70x45 mm → plus trim 74x49 mm.

All bled-off objects have to be extended into the trim area to avoid unattractive blank streaks. In further processing, the trim of 2 mm is removed and the end format output. Nevertheless please position lettering at a safe distance from the trim edge.

Image resolution

ppi (pixel per inch) is the unit used to denote the resolution of pixel images. An image resolution of at least 300 ppi is recommended for printing. With a lower resolution, images can be blurred or pixelated.

It is important in this case to create the data 1:1 as the resolution and thus the quality of images decrease when images are enlarged.

300 ppi

72 ppi

Vector data is better suited for logos and other line elements (areas of colour, illustrations etc.). Vector data does not have any pixels, but only information about points, curves, filling and other specifications, and can be enlarged and scaled down as necessary. As vector data is not converted into printer dots until it is at the printing machine, clear edges in printing are guaranteed, nothing can become blurred or pixelated. Vector data can be created in programmes such as Adobe Illustrator, QuarkXPress and Corel-Draw.

Pixel file

Document formats

The following file formats can be processed:

- .pdf (Portable Document Format)
- .ai (Adobe Illustrator)
- .eps (Encapsulated PostScript)
- .indd and .idml (Adobe InDesign)

Our imposition layouts are available in the following formats:

- .ai
- .eps
- if required .pdf or .indd

Overprinting and spaces left white

Printed sheets are pulled through printing machines at top speed. This can lead to a paper draft which in turn can lead to small blank streaks in the print.

Small streaks can also occur if the printing plates slip slightly in flexo, offset or screen printing. Overprinting, leaving white spaces and spreading are all used to avoid this effect when creating the repro copy. This can lead to slight dot fringes and colour changes with certain colours.

Note: Offset printing colours are transparent (translucent).

If, for example, a yellow circle is printed on a blue base, there are no blank streaks, but there is also no yellow circle as the mixed colour green is created. Overprinting thus does not work with coloured motifs; in most cases only black objects can overprint coloured backgrounds.

Please remember never to set white elements and fonts to overprint as these are otherwise not printed. Black fonts should be set to overprinting. This leads to a richer, more legible typeface, avoiding the blank streaks mentioned above at the edge of the characters. We make the specific spreading settings for the relevant printing methods.

Fonts

Fonts always have to be embedded in your PDF. Unfortunately, if the fonts are missing, we cannot process your data. Normally, fonts are automatically embedded during the PDF export providing they are available on your system. If you send us open data, please always send the fonts too. In Adobe InDesign, for example, this is possible using the "Package" button. If you do not have this option, you can also convert the fonts to paths/vectors. It is also important to create black fonts with 100% in the black channel. This helps avoid coloured streaks in the font.

Line weights

Various minimum line weights have to be taken into consideration depending on the printing method. Particularly with fine typefaces, lines often cannot be printed or are filled-in. You can determine the line weight easily on the bar of a lower case "e" as this is often the finest line in a font. This value should not be undercut even with negative lines and spaces.

We have included a list of the minimum line weights in the various printing methods:

- Pad printing: 0,18 mm/0,51 pt
- Flexo printing: 0,18 mm/0,51 pt
- Digital printing: 0,12 mm/0,34 pt
- Screen printing: 0,18 mm/0,51 pt

General information

We have put some basic information together for you. Please note that every inquiry naturally has to be dealt with individually as we could not hope to cover every possible case in writing here. Our customer advisers would be happy to advise you and answer any questions you may have by phone. To make sure the advice you get corresponds to your particular inquiry, we require your desired print subject.

Delivery times

A specified week of delivery refers to the week in which the goods leave the company and a specified delivery day refers to the day the goods leave the company. Our delivery times depend on the approval of the printing copies and not on when printing copies were received. We cannot confirm a delivery time without an approval of the printing copies.

Delivery times may be longer in periods of very high demand (e.g. in the run up to Christmas) or during any closures at our suppliers'.

Perishable foodstuffs

Foodstuffs cannot be exchanged. Please check the goods as soon as you receive them and send us any complaints within 24 hours. We cannot accept any complaints received after this period of time. Once the goods leave our premises, we no longer have any influence on our foodstuffs and thus cannot accept any responsibility or liability either in terms of quality or in terms of the food law.

In warm weather, it might be necessary to deliver some products by cold-storage lorry to guarantee the goods arrive in perfect condition (note: different freight costs).

Corrections

Nothing is printed until you have given us your approval in writing. Making changes to the proof you receive from us does not constitute an approval. You will receive a corrected proof to be checked and approved. Please make sure you check the proof we send you very carefully. If you are at all unsure, give us a call. We would be happy to help you. Your approval is a mandatory part of the order. It has unlimited validity and cannot be revoked. We cannot assume any responsibility for the prints you approve or for any errors of any kind which may have been overseen.

If we are in possession of your data 1:1, the proof is created free of charge. We reserve the right to charge a flat rate for changes made to the proof starting with the third corrected proof.

You will be charged for any work carried out by us in preparation for your approval if you subsequently cancel your order.

Complaints

If you have any complaints, please get in touch with us immediately. We require at least ten per cent of the total order as proof of the fault. Please send the goods back to us as proof in the original packaging. This also applies to any complaints you have about printing. Complaints about the taste and appearance of foodstuffs can only be accepted if you handled and stored the goods correctly.

Example: Foodstuffs must be stored in a dry place and be protected from changes in temperature (warm/cold).

If you have any questions, please do not hesitate to contact one of our customer advisers.

Damage during transport:

All delivered goods, whether on pallets or in the form of parcels, must be checked immediately for any damage (correct securing, wrapping/boxes undamaged?). The driver (freight/logistics company) must be made aware of any visible damage and should confirm this damage in writing on the delivery papers. Please note down exact details of the damage, including photos, and inform us immediately. Claims concerning damage reported at a later date and/or damage not recorded on the delivery papers cannot be asserted in retrospect!

Order quantities

For technical reasons, divergence of quantities up to $\pm 10\%$ is possible. Depending on the category of product, our products are either counted or weighed before they are packed. This can result in different quantities in individual boxes. The final number is checked and logged by us. If there are any irregularities per packing unit, please check the final number.

Notes on packing

When ordering, please take our packing units into consideration. The specified freight costs are approximated, not binding and cannot be determined precisely until the order has been completed.

Biscuits, cookies and other baked articles can break during transport.

Colours

Depending on the material and product, colours may deviate.

In the case of multi-coloured printing, a colour-binding proof of the provided data is mandatory.

When using a transparent, coloured or metallic base, colour reproduction can vary if a white background is not used. We would therefore recommend that you use a white background, if technically possible, which is charged as an additional print colour (not in digital printing). To avoid complaints about colour, please make sure you include a colour-binding proof.

Unchanged reprints can also demonstrate colour deviation. This is for technical reasons and cannot be avoided. Nuances of colour deviation will therefore not be recognised as a complaint.

QR-CODE

Please note that we cannot guarantee that QR codes will be legible.

Further processing

Variations can occur during processing for technical reasons. This applies, for example, to press cuts and blanks of cardboard packaging. In the case of foil products, there can be a slight shift of the motif during packing. In the case of solid designs, cutting can only be controlled within a certain tolerance. It is therefore possible that colour transitions in the motif are displaced in the cutting area and thus visible as a fine stripe (of the other print colour) at the cutting end of the packing.

In the case of bags, the content text may be concealed in part by the sealed seam.

Tetrahedron packaging:

Due to the packaging, it could happen that the position of the printed image varies on the triangular advertising space.

Sticky wrappers:

Slight blistering may occur and it could happen that the ends of the wrapper may not meet exactly.

Shelf life

The best before date specified can only be guaranteed if the product is stored correctly. In addition to taking the product-specific properties into consideration, please ensure you store the product in a dry, cool place away from sunlight. Avoid changes in temperature, particularly with products containing chocolate as this can result in a white film developing on the chocolate.

Manufacturer's notification on products

In accordance with EU directive 178/2002 for the guarantee of food safety and in compliance with the requirements of the food law, we will be attaching a manufacturer's notification to our products/selling units. For most products, the end customer, dealer or agency can decide whether he himself as issuer should be specified on the product packaging or outer packaging or whether the manufacturer should be named. Alternatively, a neutral-looking manufacturer's notification can be used. If we are not provided with a manufacturer's notification, we will use a neutral-looking manufacturer. If the end customer explicitly rejects all these specifications, the manufacturer must be released from all claims in writing.

We are obliged to advise you that manufacturer's data must comply with legal specifications. The data is not intended for any promotional purpose.

Distribution list

If the products are to be sent to different shipping addresses, please send us the address data as an EXCEL file with one address component per column (e.g. company1 / company2 / street / post code ...). Just ask for our template. Bills of delivery must be provided in triplicate. Depending on the work involved, additional costs may be incurred.

Important information

Information on creating printing copies

Make sure you supply us with print data, if at all possible 1:1, otherwise we will be obliged to charge you data processing costs.

- Line drawings should have an optimum resolution of 1,200 dpi or be vectorised. Continuous-tone illustrations should have a resolution of 300 dpi.
- When sending files by e-mail, please make sure you use the appropriate program extension (e.g. .indd for InDesign, .ai for Adobe Illustrator, .fh for FreeHand, .cdr for CorelDraw).

Our programs:

- FreeHand MX
- Adobe Illustrator CS6
- Photoshop CS6
- InDesign CS6
- QuarkXPress 7.2
- Corel Draw X4

Open data:

If your document includes any imported/embedded files (e.g. tif, eps, bmp or jpeg files), please make sure you save these separately! Please change the fonts into character paths to avoid the loading of any other fonts. If this is not possible, send us the fonts (only Mac fonts).

Please note the following when supplying data as a PDF:

- Embed fonts in PDF
- PDF compatibility to Acrobat 4.0 (Version 1.3)
- No encryption (e.g. password protection)
- No translucency
- No coloured master cells/tiling patterns
- No comments, form fields etc
- No OPI comments
- No transfer curves
- Set the imposition layout to “Overprint” and create in a separate special colour with the name “Stand”, “Stanze” or “Placement”. Otherwise this will also be printed.

Re data carriers (if you want to send your data by post):

- Please write your address, file name, logo name, product name and order number clearly on the data carrier (e.g. CD) and include a printout of the files.
- The printout should include the file name and the name of the printing colour(s) required, e.g. HKS, Pantone.

The fastest way to order:

Just send your data, including the name of the motif, by e-mail to your customer adviser. If the data exceeds 100 MB, we recommend you send us the data via FTP server. If you have any further questions on exchanging data, please do not hesitate to contact your customer adviser.

Printing information

Fine details, small fonts and trademarks can smear or disappear. In the case of multi-coloured printing, a colour-binding proof of the provided data is mandatory.

Printing methods:

4-c process: Paper/cardboard, boxes, foils, labels

4-c designs are available at attractive prices even with small quantities. Register differences cannot occur. The colours are always compiled from the 4-c process. Special colours in acc. with HKS or Pantone can only be approximated.

Boxes: A white background to the motif, as is usual with silver boxes in pad printing, is not possible. In these cases, transparent inks are not opaque and therefore often do not achieve the desired colour tone (can look dirty). On the other hand, this can result in a very elegant effect thanks to the shining through, e.g. of a shiny box. Slight streaking may be visible with extensive colour designs. With bled-off prints, an ink mist that runs over the edges may be visible at the sides. Hinges may be subject to individual colour particles. Slight scratches and unevenness may appear due to the material.

Due to the bled-off round surface structure of the product, there may be a slight distortion of the printed image.

Foils: Some parts of the sealed seams cannot be printed (see imposition layouts).

1 – 4 colour: Foils

In full-surface printing, register differences are possible to an extent. A fine unprinted line over the foil is a result of the block ends meeting. Colour rubbing on the sealed seam is also possible in full-surface printing. Designs with extensive ink coverage and metallic colours should be varnished to protect them from colour rubbing (counts as an additional print colour).

In printing technology, breaks in the screen cannot be avoided. The tolerances for this are:

- Flexo printing 3%

Due to a very coarse screen (30 l/cm), we would recommend that sweet wrappers and flowpack packaging are printed entirely without a screen.

Sweets: In full-surface printing, a white edge (each of 1 mm) remains on the side at the end of the wrapper ends. Due to the block ends meeting, a fine white stripe runs across the width of the paper.

Note: Halftone motifs only after a printability check. A colour-binding proof of the data provided is required with multi-colour screen motifs.

1 – 4 colour: Paper, cardboard

An attractive price for larger print runs. Printing of special colours in acc. with HKS and Pantone is possible. Fluorescent inks cannot be used.

1 – 4 colour: Boxes, dispensers

Register differences are possible to an extent. The double printing of individual colours may be necessary for full-surface motifs (counts as an additional print colour in each case). Slight scratches and unevenness may appear due to the material.

In printing technology, breaks in the screen cannot be avoided. The tolerances for this are:

- Pad printing 15 %

Flocking: No halftone motifs possible.

Due to register fluctuations with flocking in comparison to other printing methods, it is not always possible to ensure a seamless transition (depending on the motif).

Laser engraving: No halftone motifs possible.

Top-quality customising is possible even with small quantities. Laser engraving involves the varnish being removed, exposing the shiny surface. With full-surface lasered motifs, the cast of the box material becomes visible. Slight scratches and unevenness may appear due to the material.

In the case of coloured boxes, a coloured shadow can appear in the engraved picture.

Embossing: No halftone motifs possible.

Elegant embossing (high-relief embossing). Extremely elaborate designs are not always possible.

Sleeve: A slight distortion is possible on rounded parts.

Prices do not include VAT.
